

FlexiGraze™ Forage Sorghum

Sudan x sudan

Seeding Rate	kg/ha
Marginal dryland	3-5
Dryland	8-15
High Rainfall/Irrigation	20-30
Soil temp for optimal establishment	16°C↑

Seed Treatment Enhanced or Standard

Description
Sudan x sudan grass hybrid - Photoperiod sensitive

Market Segment/Target
Suitable for grazing, hay, haylage and greenchop

- Features**
- Ultra late flowering
 - Seed size 40-50,000 seeds/kg

- Benefits**
- Low prussic acid risk
 - Excellent for grazing and hay production
 - Delayed flowering allowing wider optimal grazing and cutting window
 - Fast growth to each cut or graze
 - Fine leaves for highly palatable hay

Harvest Height	
Grazing	initial graze/cut 1m re-graze/re-cut 0.5m
Hay/Haylage	1-2m
Greenchop	1.5m
Days to first cut/graze	approx 50

- FlexiGraze™ is an ultra-late flowering sudan x sudan forage sorghum ideally suited to hay production with its finer stems and high leaf to stem ratio
- Solid grazing option where you need multiple grazes over the growing period due to its fast regrowth
- Photo period sensitivity provides a very long growing period prior to flowering to maximise yield opportunity which enables management flexibility over timing of grazing or cutting
- The high sudan grass component provides better animal safety with very low risk of prussic acid poisoning in cattle

Rating scale: 1-9
1 - not recommended
9 - excellent
